EXPERIENCE

Lead iOS Engineer @ Bokus Play

JAN 2022 — JAN 2026

Audiobook & e-book platform

Owned the iOS app end to end. Modernized a large legacy codebase step by step, without a rewrite, while shipping the features listeners rely on daily: a subscription system with three plan types, a Bookshelf with resumable background downloads, a rock-solid audio player for online and offline listening, and a Radium-based e-book reader with LCP. Contributed to shared Kotlin Multiplatform code and mentored the iOS team.

Senior iOS Engineer @ iris Dating

JUN 2019 — JAN 2022

AI dating app, 4M verified members — featured in Forbes & TechCrunch

Core contributor on a dating app used by millions, owning features from idea to App Store. Built real-time chat on Twilio Conversations with smooth scrolling and reliable state, and delivered modular flows with MVVM + RxSwift and SwiftUI/TCA. Used Amplitude and Firebase data to sharpen performance and engagement, and mentored junior engineers.

iOS Engineer @ SoloLearn

FEB 2016 — MAY 2019

Largest social network for coding learners — featured in Apple's Today

Helped merge SoloLearn's separate iOS apps into one product serving 35M+ learners worldwide, owning features end to end. Shipped onboarding, learning content, and engagement features, and polished navigation, interactions, and accessibility across the app.

INDIE PRODUCT

APNS Pro — Solo developer

2024 — NOW

Native Mac app for testing & optimizing push notifications · Mac App Store

OPEN SOURCE

swift-pagination

Author

2023 — NOW
